## SEMPERMED POLYMED® EXAM GLOVE

Create a stronger bond against wear and tear with fusion bonding. A special manufacturing process that actually infused synthetic polymers into the latex. This creates a multi-layer glove that combines the elasticity of latex and the strength of copolymers, protecting against cracking and peeling in normal usage. Other manufacturing processes may simply apply a topical copolymer coating to the latex glove. Without fusion bonding, copolymers can fracture, creating particulate residue and possible delamination. 50 micrograms or less of total water-extractable proteins per gram. Eliminates potential aerosolization of glove powder and powder associated transfer of chemical allergens. Improved tactile sensitivity with increased gripping characteristics.

## SEMPERMED POLYMED® STERILE GLOVE

Create a stronger bond against wear and tear with fusion bonding. A special manufacturing process that actually infused synthetic polymers into the latex. This creates a multi-layer glove that combines the elasticity of latex and the strength of copolymers, protecting against cracking and peeling in normal usage. Other manufacturing processes may simply apply a topical copolymer coating to the latex glove. Without fusion bonding, copolymers can fracture, creating particulate residue and possible delamination. Sterile for aseptic procedures, such as wound care, burn care, and prepping patients. 50 micrograms or less of total water-extractable proteins per gram. Eliminates potential aerosolization of glove powder and powder associated transfer of chemical allergens. Improved tactile sensitivity with increased gripping characteristics.

### ANSELL MICRO-TOUCH® SMOOTH NITRILE EXAMINATION GLOVES

The Micro-Touch Smooth Nitrile examination gloves provide protection to meet the daily needs of the healthcare professional. This non-sterile powder-free nitrile glove helps reduce powder-related complications in both the user and patient. Its smooth finish provides excellent tactile sensitivity and its blue color clearly identifies it as a nitrile glove. Additional features and benefits of the Micro-Touch Smooth Nitrile include 100% nitrile - does not contain natural rubber latex, eliminates the risk associated with natural rubber latex allergies, inverted beaded cuff reduces chance of roll-down, and FDA approved for handling chemotherapy drugs.

### SEMPERMED SEMPERGUARD® NITRILE GLOVE

Manufactured as a co-polymer glove to provide a better fit and feel than before. This non-latex alternative is now made stronger through a manufacturing process called "fusion" bonding. "Fusion" bonding integrates synthetic polymers into the material to create a multi-layer glove for enhanced protection. Provides a better tensile strength and elasticity without sacrificing barrier protection. It has a lower modulus to reduce hand fatigue and provides more comfort. With greater strength, a better fit and feel, you get a nitrile glove that is safer and more durable to work with for longer periods of time. Better elasticity. Lower modulus. Tested for protection against chemotherapy drugs. Eliminates aerosolization of glove powder.

## ANSELL ISOTOUCH™ PF SYNTHETIC STERILE SURGICAL GLOVES

Powder-free and made from synthetic polyisoprene. Delivers all the performance characteristics of natural rubber latex without the risk of natural rubber latex sensitization. Light green in color for instant identification as a natural rubber latex-free glove, which helps to reduce confusion and risk to both healthcare workers and patients with sensitive skin. Has been tested and passed the viral penetration according to ASTM F1671 and F1670. Features patent-pending SureFit Technology. Provides surgeons, nurses and other healthcare professionals with superior protection during operating room procedures. Safe for latex-sensitive (Type I) healthcare professionals and patients. Proprietary polyurethane inner coating will not break down. It is resistant to alcohol-based hand disinfectants. Enhanced polymer coating allows easy dry- and damp-hand donning. Design and thickness allow for easy and comfortable double-gloving. Produced on new, ergonomically-designed formers to enhance fit and comfort, and to reduce hand fatigue and stress. Anti-slip smooth finish prevents slippage.
